SLING ADJUSTMENT

Special-2308 is a 2-point, adjustable, padded, combat sling specifically designed for the Next Generation Squad Weapon family (both the M7 and M250) application. The Quick Adjuster instantly lengthens or shortens the sling to transition from carrying to firing or conducting weapons manipulations without removing the weapon from the wearer. The front webbing piece (Adjuster side) is Nomex with metal hardware to prevent melting or burn-through in case the sling comes in contact with a hot barrel or hot suppressor during operational use. Triglides on both ends of the sling can be attached through sling swivels on the weapon or combined with Belt Fed Loop or Universal Loop attachments for optimal mounting.

Weight
