

DRYOUT®

P-DRYOUT-01-XX

DRYOUT®

DRYOUT is a patented, electricity-free technology that protects and rescues electronics and other gear from damage after exposure to moisture – preventing rust, corrosion, shorted circuits, and lens fog.

GOES IN WET, COMES OUT DRY®

Water Resistant

Lightweight

MOLLE
Compatible

DRYOUT rescues wet gear by actively removing moisture from devices exposed to water, humidity, condensation, sweat, snow or rain, freezing water, and spills. By eliminating moisture quickly and thoroughly, it helps protect equipment from rust, corrosion, electrical shorts, overheating, lens fog, structural weakening, and mold. It works through a patented material sandwich that actively absorbs moisture, traps it within the material, and then releases it when heated or exposed to airflow, allowing the product to be reset and reused repeatedly.
