

Blue Force Gear Receives Patent

SAVANNAH, GA-August 10, 2016- Blue Force Gear®, a growing design and manufacturing company in the firearms accessories industry, announces that it has been granted its second US patent for the [Helium Whisper®](#) load carrier system and associated manufacturing methods. US patent 9,295,319 embodies the ability for a load carrier system to include a unitary piece of material.

The patent covers two embodiments of the load carriage system. One of which pertains to the unitary piece of material, and the other being the benefits through manufacturing methods of Helium Whisper®.

Helium Whisper® revolutionizes the MOLLE attachment system by combining a single piece back panel with [ULTRAcamp®](#), an extremely durable, lightweight high-performance proprietary laminate. By reducing the number of parts involved in MOLLE attachment, the single-piece design decreases potential errors and weak points, provides easier production and offers a lighter alternative to any other pouch system.

“Blue Force Gear continues to innovate as the leader in the production of lightweight gear,” says CEO Ashley Burnsed. “For more than two decades the primary health threat to troops has been common joint, muscle and bone injuries including back pain. The average load carried by a Rifleman can be in excess of 127 pounds. Blue Force Gear celebrates every ounce of weight reduction because ounces equal pounds, and our pouches built with the Helium Whisper® system can reduce weight by up to 60 percent, making our service members lighter, faster and quite possibly healthier.”

This patent solidifies Helium Whisper® as a true innovation in lightweight attachment systems. In addition to Blue Force Gear’s products, the Helium Whisper® attachment system is in wide use by manufacturers such as SAFARILAND Group, Velocity Systems, Platatac and Strategen who license the technology from Blue Force Gear directly.

About Blue Force Gear, Inc.

[Blue Force Gear®](#) designs the best weapon slings and leads the lightweight equipment revolution with its [Ten-Speed®](#) multi-use pouches. They also reinvented MOLLE to be the world’s lightest with their revolutionary [MOLLEminus™](#) technology, [Helium Whisper®](#) pouch attachment system and high-performance laminate, [ULTRAcamp®](#). Unrivaled innovation and attention to detail set Blue Force Gear apart from others in the tactical equipment industry.
